Patient's Name: G.K

Responsible Physician: Dr.Sfandbod

Patient presentation: A 53 year-old woman with right breast cancer. She underwent breast-conserving surgery (BCS) and axillary lymph node dissection (ALND) and adjuvant chemotherapy and radiotherapy 3 years ago, and treated with Letrosol daily. From 1 year ago coughing and change in her sound happened, after bronchoscopy and biopsy, metastatic breast cancer and bilateral vocal cord paralysis was proven. She had an unsuccessful surgery on vocal cord.

CNB: ER: positive, PR: positive, HER-2: negative.

Question:

What is the treatment plan?

Recommended plan:

Systematic treatment is recommended.
