

Date: 31.12.2022; 1401/10/10

Patient's Name: S.K

Responsible Physician: Dr.Mahmoodzade

Patient presentation: A 38 year-old woman, with left breast cancer at 4 o'clock, her left axillary lymph node was suspicious and she underwent BCS and SLNB

Pathology: IDC, T: 23mm, LVI: positive, Grade: 2, Superior margin: Involved with IDC focally, SLN: 0/2.

Question:

1-Does she need margin re-excision?

2-Does she need axillary dissection?

Recommended plan:

1- Margin re-excision

2- Axillary dissection
