

Date: 25.02.2023; 1401/12/06

Patient's Name: S.A

Responsible Physician: Dr.Jalayifar

Patient presentation: A 57 year-old woman with neglected breast cancer from 1 year ago that underwent neoadjuvant chemotherapy 1 year ago and she has not referred. At this time she has locally advanced breast cancer (LABC) and positive lymph adenopathy.

CNB: ER: positive, PR: positive, HER-2: positive, Ki67:30%.

PET scan: bone metastasis (oligometastasis).

Question:

Is surgery indicated?

Recommended plan:

- 1-Surgery (MRM) was recommended.
- 2-Radiotherapy after surgery.
- 3-Endocrine therapy (HER-2: double positive).
