

Date: 15.10.2022; 1401/07/23

Patient's Name: S.A

Responsible Physician: Dr.Jalaiefar

Patient presentation: A 37 year-old woman which right MRM was done for her 2 months ago after NAC.

Pathology report: IDC with skin and NAC involvement, no lymph node in axillary sample

PH/E: Cervical LAP and multiple axillary lymph node, severe lymphedema and disability to shoulder and hand elevation

Question:

Does she need axillary resugurey?

Recommended plan:

- 1- There is no need to surgery
- 2- Palliative radiotherapy
- 3- Brachial plexus MRI +/- GAD
