

Date: 29.10.2022; 1401/08/07

Patient's Name: F.S

Responsible Physician: Dr.Alipour

Patient presentation: A 28 year-old woman with Pregnancy-associated breast cancer (PABC) in right breast and positive family history in her mother, Axillary LAP: positive (proved by FNA), Metastasis w/u was normal.

CNB: IDC, ER: negative, PR: 30%, HER-2: positive, Ki67: 30-35%.

Mammography: B5.

MRI: multifocal multicentric, B6.

PH/E: 4 cm mass in lateral of right breast

Question:

Is BCS indicated for this patient?

Recommended plan:

She is referred to NAC and no possibility to BCS and mastectomy should be done for her.

1: Breast MRI, Multifocal and multicentric mass
