

Date: 12.11.2022; 1401/08/21

Patient's Name: H.B

Responsible Physician: Dr.Alipour

Patient presentation: A 32 year-old without positive family history, with left breast mass 8.2*3.5 mm at 10 o'clock, US BIRADs 3 with increase in the size, she underwent CNB, pathology was atypical papilloma, and she was candidate for excisional biopsy.

Pathology: Solid intraductal epithelial hyperplasia and foci of low grade DCIS.

Question:

Does she need re-excision due to unclear margin or she should be referred to radiotherapist?

Recommended plan:

Re-excision is recommended.
