

Date: 10.12.2022; 1401/09/19

Patient's Name: M.H

Responsible Physician: Dr.Shahi

Patient presentation: A 46 year-old woman, with positive family history (ovarian cancer in her mother and prostate cancer in her father) and right breast MRM in 1396. She received adjuvant treatment completely. Breast reconstruction with latissimus Dorsi flap and implant was done for her on 1400.

From 2 months ago skin lesion on the right reconstructed breast appeared. In biopsy, breast metastases were proven.

CNB: Lymph Node: positive, ER: negative, PR: negative, HER-2: triple positive.

METs workup: negative.

Question:

Is surgery possible for her?

Recommended plan:

- 1- Surgery is not possible and local surgery is not suggested.
- 2- chemotherapy with Taxol, Pertuzumab and Herceptin is recommended
