Patient's Name: F.N

Responsible Physician: Dr.Majidinejad

Patient presentation: A young woman with a neglected breast mass and inflammatory breast cancer has undergone neoadjuvant chemotherapy (ER: negative, PR: negative, HER-2: triple positive). The disease has progressed on two lines of chemotherapy and currently has extensive skin involvement on the opposite side and an infected wound.

Question:

Is it possible that she undergoes toilet mastectomy?

Recommended plan:

Non-operable

- Neoadjuvant Radiotherapy was recommended

Figure 1 & 2: Tumoral involvement of the skin.
